

26 June 2009

Mr Keiichiro Teramoto, General Manager of Research & Development at Daizo Japan and One Asia Network, presented on the many innovative possibilities of the aerosol format to a delegation of 36 operations, laboratory and technical personnel from the aerosol industry who attended the Aerosol Association of Australia's first **FUTURE aerosol Introduction to Aerosol Technology Course** on 17 & 18 June at Macquarie Graduate School of Management in Sydney.

Delivered by experienced and respected aerosol industry practitioners from Australia, New Zealand and even as far as Japan, the two-day course left delegates with a greater understanding of the components that make up the unique packaging solution, how aerosol technology works and, importantly, what affects its performance.

Aerosol Association President, Lindsay Showyin said the course was part of the Association's strategy to ensure that the Australian industry remained competitive and able to deliver the quality and safety that customers have grown to appreciate and now demand.

"Training is crucial for such a technology-driven sector; to ensure we keep up with the latest international developments and deliver quality product consistently," said Lindsay.

The delegates agreed, with Randall Anthonisz of Sara Lee Household & Body Care concluding: "It was an excellent introductory course for aerosols in general". Ross Brinson of Can-Tek Aerosols Pty Ltd added that there was an "excellent calibre of speakers" and that the course was "very well balanced regarding topic coverage."

Individuals or companies interested in information on future courses should email training@futureaerosol.com or call (02) 9633 9011, or keep a look out on www.aerosol.com.au.

Ends.
