FOR IMMEDIATE RELEASE

AEROSOL ASSOCIATION LAUNCHES INDUSTRY TRAINING INITIATIVE

The Aerosol Association of Australia is running a two-day '**Introduction to Aerosol Technology**' Course from 17-18 June 2009 at MGSM Conference Centre in North Ryde, New South Wales.

Designed to give a greater understanding of the components which make up the aerosol, how this unique technology works, and the factors which affect aerosol product performance, the course is a *must* for anyone working in an operations, laboratory or technical role with aerosols.

Aerosol Association President, Lindsay Showyin said: "the course will be delivered by an impressive line up of experienced and respected local and international speakers from the industry, and is ideal for anyone new to the aerosol or wishing to increase their knowledge of aerosol technology."

"Speakers will cover all aspects of aerosol production, including aerosol cans and components, propellants, formulation considerations, safety, testing, and industry regulations", Showyin notes.

"In addition, in a special highlight, speakers from Daizo Japan will share some exciting innovations in the aerosol format," he added.

Course numbers will be kept to 35 to allow for discussion and interaction with the speakers and other delegates, so early booking is recommended.

More.../

The course costs \$650 incl. GST for Association members and \$895 incl. GST for non-members.

For further details, or to book, please email training@futureaerosol.com or go to the 'FutureAerosol' section at www.aerosol.com.au.
